## Racing JS

---

Learn JavaScript with live exercises in your browser

2.1.1

# Racing JS

delivery method: racingjs on Github  
language: JS

Let's go behind the scene to create some javascript logic for provided HTML pages.

You are about to do the same job as a javascript developer when retrieving pages from an integrator.

You can use all the javascript features you want.

Use your JavaScript skills, directly from your favorite web-browser, to solve problems.

The exercises are provided as HTML pages. You have to interact with the HTML code given:

- Try to solve each exercise by modifying as few HTML or CSS as possible
- You have to hand in the JavaScript files (for instance “script/ex\_01.js”)
- You must respect the indicated paths in the HTML files to create and name your JavaScript files

Simple is beautiful

Exercises are independent from each other, you can solve them in the order that suits you best

Make sure that your JavaScript code works without having to edit the HTML code.
